Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, 8-13, 15-20 and 22-27, drawn to a method of treating or preventing secondary damage resulting from spinal cord injury, by administering beta-interferon starting at about the 11th day after injury; classified in class 514, subclass 2+.
- II. Claims 1-5, 7-12, 14-19, 21-26 and 28, drawn to a method of treating or preventing secondary damage resulting from spinal cord injury, by administering beta-interferon starting at about the 4th week after injury; classified in class 514, subclass 2+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are directed to related methods. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the methods of Inventions I and II are distinct, each from the other, related only in that they involve administration of beta-interferon to a subject with spinal cord injury. Since the times at which the beta-interferon is administered in each method are mutually exclusive, the methods are distinct. Furthermore, the methods are distinct in that they have differing chances of success. As listed in the Specification (p. 11), day 11 after injury

Art Unit: 1647

represents the time-point at which there is maximal inflammation but not yet any secondary cell death. As predicted by the Specification, this is the time-point at which beta-interferon probably has the greatest chance of success. On the other hand, the 4th week after injury represents the time period during which there is decreased inflammation and extensive irreversible necrosis and tissue decay. One would expect, then, that the two methods differ in their chances of success, and are therefore patentably distinct.

Because these inventions are distinct for the reasons given above and the search required for each Invention is unique, as well as by their divergent subject matter and different search requirements, restriction for examination purposes as indicated is proper.

In response to this requirement, applicants must elect either Group I or Group II. Applicant is advised that in order for the reply to this requirement to be complete it must include an election of the invention to be examined even though the requirement be traversed (37 C.F.R. 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 C.F.R. 1.48(b) and by the fee required under 37 C.F.R. 1.17(i).
